

Topic: Tailwind CSS Basics

Date: 13 September 2025

Mentor: Sushant Goyal

HTML PAGE

RAW CSS

- external styling
- internal styling
- inline styling

NO JS till now

Each of the styles was added using some classed or id's.
each property was written separately by us.

Javascript

- Node.js -> Built on top of JS
- React JS
- Ember

CSS

- Bootstrap
- Tailwind
- Material CSS

Tailwind CSS is like Lego blocks. It has predefined or prebuilt blocks for styling.

Using CDN we can directly consume the content present on the URL

Instead of using any custom class and defining CSS properties, we can directly use the classes defined within the Tailwind library.

Apply colors in Tailwind

1. Text Color Classes

text-{color}-{shade}

text-red-500

text-blue-100

2. Background Color Classes

bg-{color}-{shade}

bg-blue-700

bg-green-300

3. Border Colors - Make sure border is added to the element

border-{color}-{shade}

border-blue-200

4. Colors to pseudo classes

hover:{class in tailwind}

hover:bg-blue-600

focus:bg-blue-300

5. Border Radius and Colors

rounded-{size}

rounded-none

rounded-full

rounded-[10px]

6. Gradients

bg-[linear-gradient(to_right, _#3b82f6, _#10b981, _#f59e0b, _#ef4444)]

bg-gradient-to-r from-yellow-300 via-red-100 via-black-600 to-blue-500

100 - Lightest shade

200

300

400

500 - Normal Color

600

700

800

900 - Darkest Shade

Typography Styles

1. Text Size

text-{size}

text-base - normal - 1rem

text-4xl

text-[custom-size]

2. Font Weight

font-{weight}

font-thin

font-extrabold

font-size: 1.2em

5. Text Alignment

text-`{position}`

text-center

text-right

text-left

Spacing and Sizing

1. Width

w-`{size}`

w-`[custom-size]` -> px, rem, em or %

2. Height

h-`{size}`

h-`[custom-size]`

3. Margin

m-`{units}`

- it will apply margin on all sides

mt / mb / mr / ml - `{units}`

- it will define to specified direction only.

my / mx - `{units}`

- it will define margin to specified axis

- y will correspond to vertical axis, x will correspond to horizontal axis

4. Padding

p-`{units}`

- it will apply margin on all sides

pt / pb / pr / pl - {units}

- it will define to specified direction only.

py / px - {units}

- it will define margin to specified axis

- y will correspond to vertical axis, x will correspond to horizontal axis

NOTE: height: calc(var(--spacing) * 36);

there is a spacing property in tailwind which is set to 0.25rem.

based on this spacing height and width are calculated when h-{size} or w-{size} is provided as class.

This is applicable to margin and padding as well.

Borders

border

defines a default border with 1px width and solid as the style and black as its color

border-{width in pixels}

border-{color}

to use this property ensure border is present using border or border-width class

Images

```

```

media (max-width: 480px) -> where maximum width of device is 480

media (max-width: 768px) -> where maximum width is 768px

media (min-width: 481px) and (max-width: 768px)

480

768

1024

General CSS

Netlify Deployment

- path to the file
- index.html is named correctly
